### Innovative Solutions for Green Technology

Green Duck Energy Solutions, Inc.

There have been many amazing advancements in renewable technology, but for most people they are hard to apply unless you spend a lot of time getting to know the energy landscape. "We were trying to reduce mounting electric bills," said Greg Hawkinson, CEO of Green Duck Energy Solutions on how their company began. "We knew that solutions were out there, but they were far from easy to locate, understand or employ."

The Green Duck group is comprised of native Minnesotans – a master electrician, experienced mechanic, business attorney, marketing and sales professional – who set out to access, understand, and create affordable green energy solutions for the average homeowner. The demand for their knowledge and products has allowed them to quickly expand and also create solutions for both government and light commercial requests.

For over a year now, the team has built strategic alliances with several established green energy manufacturers including PowerFilm Solar, Ventera Wind Generators, and Interstate Batteries, to name a few. "These experienced companies liked our strategy and our business values," explains Hawkinson. "For us, it made sense to work with companies in the Midwest who are at the top of their game and we are honored to be aligned with them."

Through these partnerships, Green Duck takes the most innovative technologies to design solutions that work in the 'real world' such as solar powered commercial signage, solar powered golf carts, and back up energy systems.

For several months, Green Duck has been working with developers in Kansas City to incorporate solar energy into their new and existing bus shelters. Green Duck is using that experience to create a solar powered bus shelter for the City of Mankato. At this time, Mankato's bus shelters are not lit because it is expensive running electricity to them; however with the help of Green Duck, bus stops will be a safer and brighter area once the project is complete.

Green Duck is also collaborating closely with Minnesota State University, Mankato, and the City of Mankato as well as many other valuable business-building resources to create renewable energy solutions right in our very own back yard!
